PROVIDE A DAMA INPUT AND A CLOCKINFUT HAVING 1110 RISING AND FALLING EDGES STORE THE DATA INFUT IN A FIRST FLIP-FLOP ON THE CLOCK FALLING EGGES. STORE THE OUTBUT OF THE FIRST FLIP-FLOF IN A -1130 THIRD FLIF-FLOP ON THE CLOCK FALLING EDGES. DELAY THE OUTPUT OF THE -1140 FIRST PLIP- FLOR STORE THE DELAYED DARN'T OF THE FIRST PLIP-FLOP IN ~1150 A SECOND FLIP-FLOP ON THE CLOCK RISING EDGES. XOR THE DATA AND THE FIRST FLIP-FLOP OUTPUT -1160 to GENERATE AN ERROR SIGNAL. XOR THE OUTPUTS OF THE SECOND AND THIRD FLIP-FLOPS TO GENERATE A REFERENCE SIGNAL
